

Lumo

100

Incredibly smart design, premium quality, and effortless handling.

Our proprietary portable lightbox is assembled in just minutes. Lumo sets up quickly and hassle-free, delivering a professional illuminated display – completely tool-free.

The lightbox is built from foldable frame modules with an aluminium exterior finish, creating a clean, modern frame for your graphic message. LED lighting is seamlessly integrated into the frame modules, with all electronics fully concealed, resulting in a smooth, elegant and cohesive appearance.

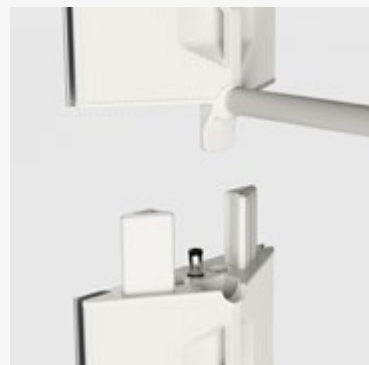

Lumo makes it easy and efficient to transform your visual communication into something that truly stands out.

Covered by the Spennare Lifetime Warranty.

Lumo is a powerful, hard-to-beat tool for marketing on the go

With Lumo, you get a sleek, illuminated display surface that delivers a professional impression – without time-consuming assembly or the hassle of tools.

Easy to set up and just as easy to fold down into a compact format, making it convenient to transport and store.

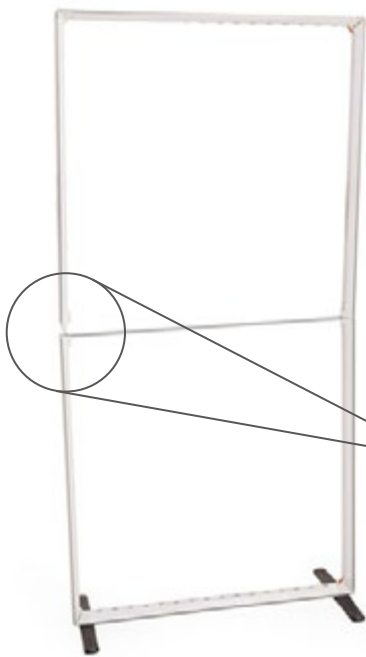

Lumo KIT complete

Includes 1 Lumo frame, 2 prints (one for each side), and a practical flight case.

The LED lighting provides even, bright illumination across the entire display surface, making it perfect for messages that need to stand out from a distance. All electronics are neatly integrated into the frame modules, creating a premium, high-end look and feel.

Assembled in just minutes

You build the lightbox by connecting two frame modules with a stabilising centre strut. The fabric graphic is then mounted by hand, followed by simply plugging in the power cord.

Angle out the feet from the underside of the bottom module.

Fold up the sides of the bottom module.

Stabilise the bottom module using the support strut.

Mount the top module onto the bottom module once the module has been stabilised with the strut.

Attach the fabric graphic with the silicone edge facing down, inward.

Connect the power cord.
